PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with hands-on experience provisioning and securing AWS infrastructure as code (Terraform/CloudFormation), containerizing and orchestrating services with Docker and Kubernetes, and building CI/CD pipelines with Jenkins and GitHub Actions that bake in security scanning (Trivy, Gitleaks, SonarQube). Comfortable owning cloud operations independently — monitoring with Prometheus/Grafana/CloudWatch, alerting, cost optimization, and security hardening — while collaborating with cross-functional Agile teams. Strong Linux systems background with a track record of cutting deployment errors, release cycle time, and manual operational overhead through automation.

EXPERIENCE

DevOps Engineer Nov. 2025 – Present

Amalitech Takoradi, Ghana

- Designed, provisioned, and managed production-grade AWS infrastructure with Terraform and CloudFormation — EC2 auto-scaling groups, ECS, ECR, S3, IAM/SCPs, VPC, Route 53, CloudWatch, and EventBridge — keeping dev/staging/production fully repeatable, auditable, and version-controlled.
- Built and maintained end-to-end CI/CD pipelines with Jenkins and GitHub Actions covering build, test, and deployment, with blue-green/rolling strategies and rollback mechanisms, cutting average release cycle times by 35%.
- Integrated security scanning into CI/CD using Trivy, Gitleaks, and OWASP Dependency Check, and enforced SonarQube quality gates — catching vulnerabilities and code-quality issues before deployment.
- Containerized applications with Docker (optimized multi-stage builds) and orchestrated them on Kubernetes — Deployments, Services, ConfigMaps, Secrets, HPA, namespaces — for consistent environment parity and scalability.
- Configured monitoring and logging with CloudWatch, Prometheus, and Grafana, and managed secrets/config via AWS Systems Manager Parameter Store, improving system visibility, uptime by 25%, and incident response time.
- Hardened cloud security with multi-tier VPCs, Security Groups/NACLs, fine-grained IAM roles, and KMS/TLS encryption; reduced non-production compute costs via automated EC2 scheduling with EventBridge.

AWS re/Start (Intern) Sept. 2025 – Nov. 2025

Amalitech Kumasi, Ghana

- Provisioned and configured 10+ AWS services — EC2, S3, IAM, and CloudFormation stacks — for repeatable infrastructure deployment across multiple environments.
- Designed secure VPC architectures with public/private subnets, gateways, route tables, and least-privilege IAM, reducing security misconfigurations by 30% per AWS Trusted Advisor findings.
- Built and optimized Amazon RDS databases (instance sizing, automated backups, Multi-AZ, parameter tuning) and integrated S3 with EC2 via instance profiles and pre-signed URLs, improving query efficiency by 40%.

PROJECTS

Achievement & Utilization Tracking System | Terraform, Jenkins, Docker, ECS, ECR 2025

- Built an end-to-end CI/CD pipeline for frontend and backend apps using reusable Terraform modules, Docker, and Jenkins; integrated SonarQube, Trivy, and Gitleaks scanning and stored config in SSM Parameter Store.

Node.js App Deployment & Monitoring on AWS | EC2, Nginx, PM2, Prometheus, Grafana 2025

- Deployed a production Node.js app on EC2 behind an Nginx reverse proxy with PM2 process management and SSH key auth; set up Prometheus/Grafana dashboards and alerting for CPU, memory, and app performance.

EDUCATION

Kwame Nkrumah University of Science and Technology Kumasi, Ghana

B.Sc. Computer Science Sept. 2021 – Aug. 2025

- Relevant coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Distributed Systems, Cloud Computing, Cybersecurity Fundamentals.

CERTIFICATIONS

- AWS re/Start Graduate — Amalitech / Amazon Web Services, 2025 (cloud computing, security, networking, Linux, Python scripting).

TECHNICAL SKILLS

Cloud & IaC: AWS (EC2, ECS, ECR, S3, IAM, VPC, CloudFormation, CloudWatch, Lambda, EventBridge, Route 53, SNS, EKS), Terraform, Ansible

Containers & CI/CD: Docker, Kubernetes (Deployments, Services, HPA, ConfigMaps, Secrets), Jenkins, GitHub Actions, GitOps, blue-green/rolling deployments

Monitoring & Logging: CloudWatch, Prometheus, Grafana, ELK Stack, structured log aggregation, alerting

Security & DevSecOps: Trivy, Gitleaks, OWASP Dependency Check, SonarQube, IAM policies, KMS, TLS/SSL, RBAC, VPC/NACLs

Networking: TCP/IP, Nginx (reverse proxy), CIDR/subnetting, Security Groups

Databases, Languages & Tools: MySQL, PostgreSQL, MongoDB, Amazon RDS, Python, Bash/Shell, JavaScript, Java, C++, SQL, Git/GitHub, PM2, Postman, Agile/Scrum, Linux administration
